# RAJASHEKAR REDDY GURRALA

Birmingham, AL | +1 (205) 585-6941 | rajashekar.g215@gmail.com | LinkedIn

CONSTRUCTION MANAGEMENT | PROJECT ENGINEER | FIELD ENGINEER | CIVIL ENGINEER | BIM & PROJECT EXECUTION SPECIALIST | COST CONTROL & FINANCIAL TRACKING | BUDGETING

## PROFESSIONAL SUMMARY

Civil Engineering MS candidate at the University of Alabama at Birmingham with hands-on field and project engineering experience across three internships including a $45M+ commercial building project, state highway construction, and foundation works. Core strengths include field operations, building layout, line & grade control, QA/QC inspections, site safety (OSHA 30-Hour certified), subcontractor coordination, cost control, quantity take-offs, pay application verification, and construction scheduling support. Proficient in AutoCAD, Revit, Navisworks, BIM 360, Primavera P6, and Bluebeam with active FE Exam enrollment in 2026. Brings a rare combination of real job-site accountability, BIM-integrated digital workflows, and academic construction management training ready to contribute immediately as a Field Engineer, Project Engineer, or Civil Engineer on commercial, infrastructure, or heavy civil projects across the USA.

## EDUCATION

**University of Alabama at Birmingham** **Jan 2024 - Dec 2025**
Master of Science, Civil Engineering Birmingham, Alabama
**GPA:** 3.6 / 4.0
•**Coursework:** Construction Engineering Management, Construction Safety, Project Management, Estimation & Bidding, BIM

**Mother Teresa Institute of Science and Technology** **Jun 2020 – Jul 2023**
Bachelors of Technology, Civil Engineering Sathupally, India
- **GPA:** 8.0 / 10
- **Coursework:** Structural Analysis, Reinforced Concrete Design, Steel Structures, Geotechnical Engineering, Foundation Engineering, Construction Planning & Management, Transportation Engineering, Surveying, Environmental Engineering,

## EXPERIENCE

**BECC, INC.** **Mar 2026 – Present**
Senior Engineering Technician & Construction Inspector Birmingham, Alabama
- Conduct field and site inspections using ACI 318 and AISC 360 criteria, verify foundations and steel work, and confirm safety compliance, resulting in zero code violations.Review engineering drawings and bar-bending schedules for accuracy and constructability, applying the AISC Steel Construction Manual, which helped identify and correct design issues before construction
- Perform quality control checks on concrete mixes, reinforcement placement, and workmanship with standard QA checklists, ensuring material quality met project specifications.
- Coordinate daily with engineers, project managers, and contractors to align project requirements, facilitating timely issue resolution and keeping the schedule on track.Prepare detailed inspection reports and technical summaries in the company's reporting system, documenting findings and corrective actions, which improved stakeholder communication
- Identify deficiencies against ACI 318 and AISC 360 criteria, recommend corrective actions, and track remediation until compliance is achieved, reducing rework incidents and improving overall project quality
- Assist in concrete compressive-strength testing and steel reinforcement inspections, collect data with calibrated equipment, and analyze results per ACI 318, enabling timely design adjustments and preventing schedule delays
- Maintain accurate inspection logs and compliance documentation in the company's QA system, enabling quick retrieval for audits and ensuring regulatory adherence.Provide technical guidance on Bar Bending Schedule preparation and construction-safety practices to junior technicians, fostering skill development and improving team adherence to safety protocols

**G+8 Commercial Building Construction (Shear Wall Technology) - Level Builders Pvt Ltd** **Jan 2023- Jul 2023**
Graduate Site Engineer Intern Hyderabad, India
- Supported field operations under the Project Superintendent on a $45M+ commercial building, using AutoCAD and on-site surveying tools to coordinate shear-wall installation, which helped maintain the project schedule and ensured compliance with IBC standards
- Supported cost control and budget monitoring for structural concrete and shear-wall activities by tracking expenditures in Excel and reviewing vendor quotes, which contributed to keeping the project within its allocated budget
- Prepared quantity take-offs and validated pay applications by cross-checking installed quantities against contract documents with digital quantity-extraction software, resulting in accurate billing and timely payments
- Assisted in reviewing subcontractor invoices and tracking commitments, change orders, and project cost reports using Excel and project-management software. Coordinated material procurement and delivery schedules with subcontractors and suppliers using procurement logs, ensuring all required items arrived on site on time and supporting uninterrupted field execution.
- Maintained daily field reports and supported schedule tracking to ensure work progressed within budget and timeline constraints.
- Prepared Daily Construction Reports (DCRs) and uploaded electronic field documentation to the project's SharePoint site.

**Megha Engineering & Infrastructures Ltd** **Jul 2022 - Oct 2022**
Engineering Intern Sathupally, India

- Supported planning, quantity take-offs, budgeting, and site coordination for a State Government rural development scheme using AutoCAD and Bluebeam, enabling timely execution of roadway works-including earthwork, subgrade, base course, drainage, and asphalt paving-while staying within budget
- Reviewed and verified contractor invoices and subcontractor bills against measured quantities and contract rates, ensuring accurate payments and preventing overbilling
- Prepared daily progress reports and assisted with schedule, quality, and safety compliance monitoring, providing stakeholders with up-to-date information that supported on-time project delivery

**Godha Infrastructures Pvt. Ltd.** **Nov 2019 - May 2020**
Undergraduate Engineer Intern Hyderabad, India

- Assisted field engineers and superintendents with daily site operations by preparing daily logs, coordinating material deliveries, and communicating schedule updates, which helped keep the project on track
- Supported foundation, post-tensioning, and slab work by reviewing structural drawings, applying RS Means unit pricing, and coordinating with subcontractors, ensuring design intent was met and reducing rework
- Participated in safety meetings, site inspections, and quality audits, documenting findings and communicating corrective actions, which improved site safety compliance. Assisted in shop drawing review and technical documentation, using Primavera P6 to update schedule data and preparing clear reports for the project team, facilitating timely decision-making
- Conducted material testing and inspections according to ASTM specifications, recorded results in QA/QC logs, and reported non-conformances, helping maintain compliance with project standards

## PROJECTS

**Bridge Engineering Research – Bridge Failure Analysis**

- Analysed bridge failure case studies to identify structural, geotechnical, and design flaws, and proposed modern engineering solutions to prevent future failures.

**BIM Case Study – Building Information Modeling (BIM) Based Safety Planning In Construction Site**

- Developed a BIM-based safety model using Revit and Unity to simulate accidents and designed a computer vision–integrated fram ework for real-time construction site safety monitoring.

**Non-Thesis Research - Energy Performance Analysis Using Revit Insight And Green Building Studios**

- Developed a BIM model in Autodesk Revit and conducted energy simulations using Insight and Green Building Studio to evaluate building performance (EUI: 206 kWh/m²/year).Analysed thermal and daylight factors, recommending envelope improvements to r educe cooling loads and enhance energy efficiency.

**Construction Estimation & Bidding – Residential Garage Project**

- Prepared detailed Bill of Quantities and cost estimates for structural, architectural & utility works using RS Means based unit rate analysis. Performed accurate quantity take-offs using On-Screen Take-off (OST) from construction drawings and specifications.

## TECHNICAL SKILLS

- **Construction & Engineering:** Site Execution & Supervision, Contractor & Subcontractor Coordination, QA/QC, Construction Safety, Cost Control, Quantity Verification, DPR Documentation, Scheduling Support (CPM basics), Constructability Review
- **Estimation & Cost:** Quantity Take-Off (Manual & Software), BOQ Preparation, RS Means-based Unit Pricing, Bid Analysis, Contractor Billing Verification, Cost Forecasting
- **Structural & Civil**: RCC Structures, Foundations, Pipelines, Structural Drawings Review, Bar Bending Schedules (BBS), Load Path Understanding
- **BIM / Digital Construction**: Revit Modelling, Navisworks Clash Detection, BIM Coordination, 4D Scheduling Concepts, Digital Quantity Extraction, Model-Based Constructability Analysis
- **Software**: AutoCAD, Revit, Navisworks, On-Screen Take-off, Microsoft Excel, Microsoft Word,MS Project, Primavera P6 (basic), Bluebeam
- **Codes & Standards:** AISC 360 – Specification for Structural Steel Buildings, AISC Steel Construction Manual (LRFD & ASD), ACI 318 – Structural Concrete, ASCE 7 – Minimum Design Loads, IBC – International Building Code, IS 456 & IS 800 – RCC & Steel
- **Soft Skills:** Analytical & Critical Thinking, High Attention to Detail, Technical Documentation & Reporting, Clear Written & Verbal Communication, Team Collaboration, Problem Solving, Time Management, Responsibility & Professional Ethics, Adaptability in Design & Site Environments

## CERTIFICATIONS

- OSHA 30-Hour Construction Safety, American Red Cross Course: Adult and Pediatric First Aid/CPR/AED, AutoCAD, Revit, STAAD Pro, 3Ds Max, Sketch up, Civil 3d FE (Fundamentals of Engineering) – Enrolled (2026)
